DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Hasegawa (JP 60246128).

Hasegawa teaches applying a voltage signal of a predefined level to said eternal connecting pin and restoring a faulty connection between said external connecting pin and elements of said integrated circuit device as a result of said application of said voltage signal, subject to the condition that said external connecting pin is not completely disconnected from said elements of said integrated circuit device (see Abstract).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gabele et al. (U.S. 5,991,521) in view of Hasegawa (JP 60246128).

Art Unit: 2857

Gabele et al. teach using an integrated circuit programming device, executing a device read command (see col. 4, lines 4-45); obtaining an error message from the programming device identifying certain of the connecting pins appearing to be disconnected from a memory circuit element (see col. 4, lines 22-30).

Gabele et al. fails to teach connecting a voltage to said certain of said connecting pins appearing to be disconnected from the memory circuit element and applying a voltage signal to the certain of the connecting pins for a predetermined period of time and restoring faulty connections between the memory circuit element and at least one of the connecting pins appearing to be disconnected from the memory circuit element.

Hasegawa teaches this feature (see Abstract). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate Hasegawa's teaching into Gabele et al.'s invention, because a voltage signal would be applied to the pins that are appear to be disconnected from the circuit. Therefore, current would flow through the pins to power up the elements connected by the pins to the rest of the circuit.

3. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gabele et al. (U.S. 5,991,521) in view of Hasegawa (JP 60246128) and Laing et al. (U.S. 5,399,975).

Gabele et al. in view of Hasegawa teach the system as stated above except that the step of applying comprises applying the signal to the certain connecting pins through a resistor.

Art Unit: 2857

Laing et al. teach this feature (see col. 2, line 57 to col. 3, line 4). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate Laing et al.'s teaching into Gabele et al. in view of Hasegawa's teaching, because the voltage would be applied to the pin through a resistor that would limit the current flowing through the pins. Therefore, system would not experience excess of current flow that might cause damage in the system.

Response to Arguments

4. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Contact information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohamed Charioui whose telephone number is (571) 272-2213. The examiner can normally be reached Monday through Friday, from 9 am to 6 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marc S Hoff can be reached on (571) 272-2216. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
